

**Your Situation:** Your SAP Database is constantly growing. You have high costs for SAP data storage. Your system performance is degrading and backup times are increasing. In order to solve these issues, you consider implementing data archiving in your SAP R/3 system.

**Your Problem:** You have a long list of questions that need to be answered:

- Which modules are most important for archiving?
- How much data can be archived in the system?
- Which archiving objects have to be implemented for maximum efficiency?
- How can users in the SAP system access archived data?
- What is the best retention strategy?
- What are the side effects of data archiving?
- Is it necessary to use an optical storage system?
- Are the anticipated savings higher than the costs for implementing data archiving?
- Will data archiving limit the ability to satisfy legal as well as audit requirements?

**Our Solution:**

- What steps are necessary for a quick and efficient implementation?

The CoRoS Data Archiving *Getting Started* Package answers these questions for you. The *Getting Started* package provides you with:

- Analysis of your SAP R/3 database with standard SAP and custom developed tools.
- Assessment of your functional and technical requirements for data archiving.
- An on-site Workshop to introduce data archiving functionality to your team and to gather retrieval requirements for archived data.
- Recommendations for cost efficient long-term data storage.
- Comprehensive report, outlining the results of the database analysis, introducing the most efficient archiving strategy for your system, providing a project plan for the implementation of data archiving, and a detailed description of all archiving objects that are part of your data archiving implementation.
- Demonstration of archiving and retrieval functionality for selected archiving objects in your environment.

CoRoS has successfully implemented **data archiving in all modules** available for SAP customers in various industries. We have extensive archiving experience with all SAP R/3 release levels. Our partnerships with leading vendors of optical storage systems and archiving add-on tools help us to find the **best possible solution** for your data archiving problems.
